

ESP-SMT Smart Control System

RAIN BIRD®

The Rain Bird® ESP-SMT Smart Control System combines the intuitiveness of Rain Bird's trusted Extra Simple Programming with the accuracy of weather-based control to help you save even more time, money and water.

Application:

The ESP-SMT Smart Control System is used for residential or light commercial applications.

Outstanding Results:

- The ESP-SMT is the only smart controller that not only delays irrigation; it also measures rainfall, including the amount and intensity. And, because its calculations are based on both accumulation and force, the ESP-SMT can more accurately adjust your watering schedule to prevent under- or over-watering.
- The ESP-SMT is a less complex version of the weather-based control systems currently used to keep golf courses in perfect condition. It provides you with a precise, sophisticated—yet affordable—automatic sprinkler solution.
- The ESP-SMT maximizes water efficiency by factoring in everything from soil type to the slope of your lawn to the amount of sun exposure different areas receive. All of these details are calculated for every zone of your automatic sprinkler system to help you maintain a lush, healthy lawn and landscape.
- The ESP-SMT panel is designed to fit any ESP Modular chassis for quick and easy system upgrades.
