

RC2 Smart Controller

Maximize RC2 Control with Rain Bird 2.0 App

Use the NEW Rain Bird 2.0 App to set up and program the RC2 Smart Controller with or without WiFi. This flexible, indoor/outdoor controller has capacity for eight zones, three programs, and up to four start times per program. Packed with water-saving and usability features, the RC2 impresses homeowners and makes the pro's job easy.

Unlock Smart Irrigation

Increased efficiency for your clients *and* your team.

Maximize Water Savings

Advanced, weather-responsive features save up to 50% in water usage.

The Best Solution for Installers

With convenient templates, setup and programming takes 45 seconds or less!

RC2 Smart Controller

Unlock Smart Irrigation

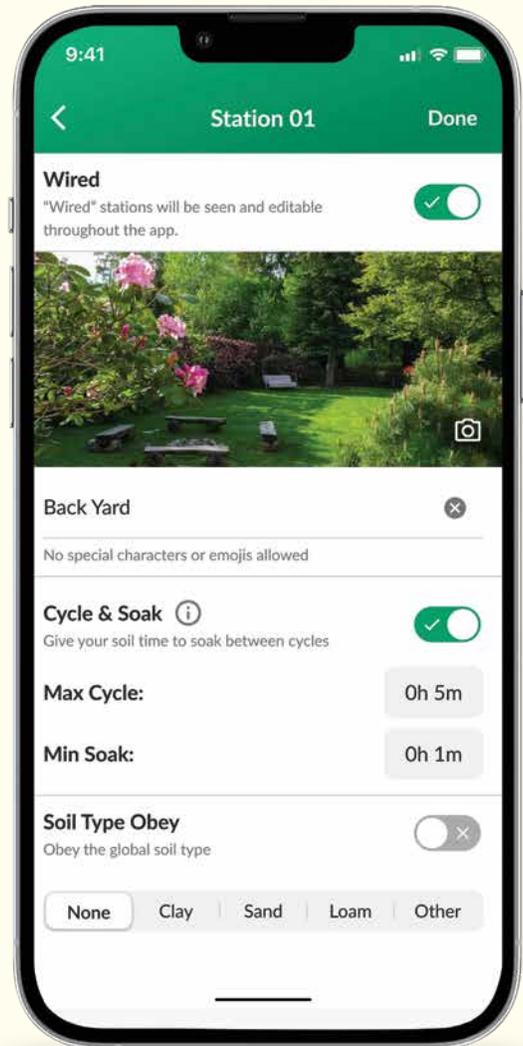

- Free, ultra-fast and intuitive NEW Rain Bird 2.0 App
- Access from anywhere in the world
- Smart-home-integration
- Remote updates keep the system current with latest innovations
- Native language programming

Maximize Water Savings

- WaterSense-approved, right out of the box
- Predictive Rain Delay prevents watering when rain is expected
- Automatic Seasonal Adjust adapts water windows by program to increase or decrease watering depending on weather conditions
- Cycle & Soak™ by station provides water to the plants while avoiding run-off when compact soils or slopes are present
- Rain-sensor-compatible

Maximum Installer Productivity

- Powerful, unique features developed with the professional irrigation contractor in mind
- Create and store your 3 most used programs as templates for expedient setup, instead of setting them up manually
- Guest Mode provides quick on-site access when WiFi is not available. Load a saved template in Guest Mode and have irrigation loaded and ready to go in less than one minute!
- Shared Access allows the owner to share or revoke remote access from their mobile device for as long as needed
- Convenient Filter and Search capabilities allow you to pull up sites by name, address, or more
- Remotely manage the RC2 controller from the IQ Central Control dashboard
- Perform batch editing to groups of controllers. Example: Apply rain delay to all properties in an HOA all at once
