

# Flume™ Smart Home Water Monitor

## Conserve and save with Flume and Rain Bird®

For years, Flume has enabled users to generate between 10% and 20% savings on their indoor water use. However, more than half of water consumption occurs outdoors. Through a partnership with Rain Bird, Flume now helps homeowners better understand where outdoor water is going, identify patterns in their water usage, discover leaks in their irrigation system and ultimately save upwards of 25% on their outdoor water consumption.

### Smart Water Use Monitoring

High-definition water use reports give users valuable insight and help them manage their water consumption.

### Leak Detection

Receive alerts via push notifications when an abnormal water usage event occurs.

### Partnership

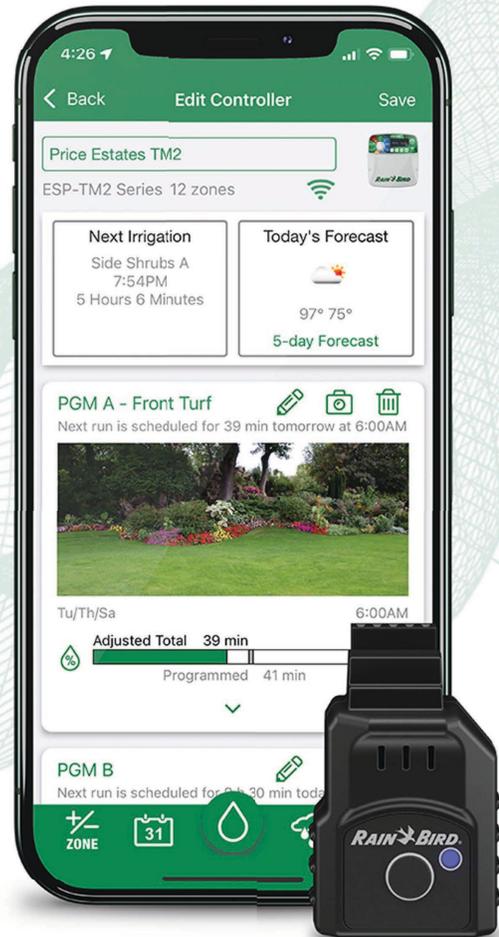

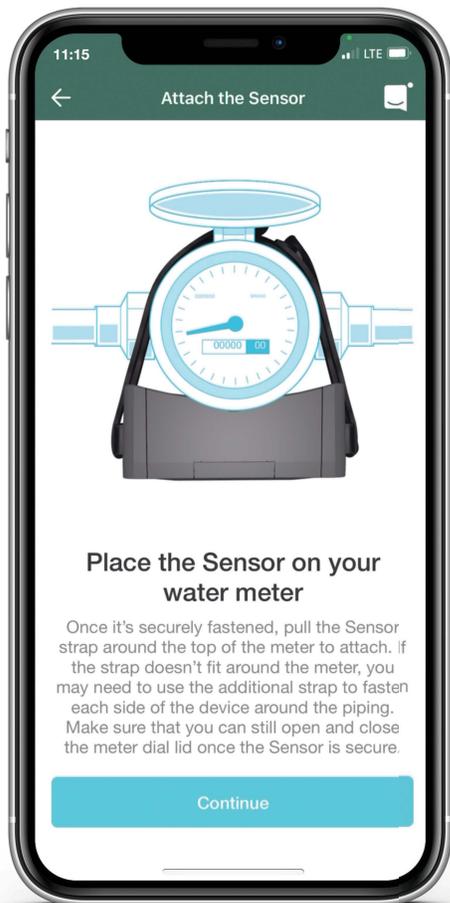

Together, Flume and Rain Bird will help homeowners know exactly how much water is being used by their irrigation system and maximize savings.
