

EAGLE™ 351B Series

The *First* Golf-Quality, Precision Short-Throw Rotor

Golf Quality

So precise, so reliable, so durable, the EAGLE™ 351B comes with a **5-year warranty** when installed with a Rain Bird swing joint.* Designed to sustain up to 100 psi, the EAGLE 351B will withstand the water pressure of a golf course irrigation system. You'll save time and labor when you install these rotors and they just keep performing, year-in and year-out. The nozzle extends a full 3.25 inches over the head, spraying the distinctive Rain Bird® Rain Curtain™ with its efficient distribution, at a range that you dictate with unmatched precision, even if your water pressure fluctuates. With tough interior components, including a water-lubricated gear, nothing will break down on this rotor or we'll replace it, even five years after you put it in the ground!

* Otherwise, the EAGLE 351B is still warranted for three years.

Rain Bird Corporation

With a heritage of precise engineering, and a commitment to uncompromising quality testing, Rain Bird is the only company exclusively dedicated to irrigation systems. From Reservoir To Rotor™, we are the world leader in irrigation.

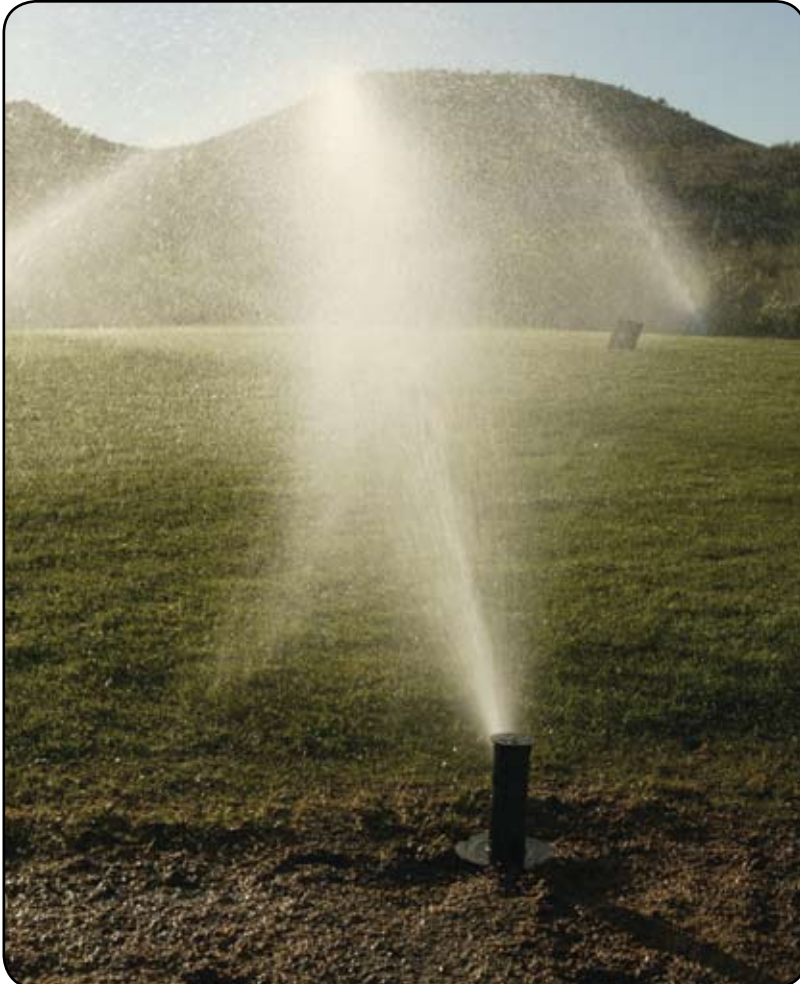

Today's intricate golf course designs and the increasingly precious water supply demand rotors that perform to exacting standards in confined areas. Architects, designers, and superintendents need a highly adjustable short-throw rotor that can stand up to high water pressure for the long term. The EAGLE 351B is the first golf-quality rotor, fulfilling those needs.

Quick and Easy Maintenance

The EAGLE 351B is fully top serviceable—no need for digging. Available with NPT, BSP, and ACME inlet threading, the EAGLE 351B block rotor is ready for immediate installation in your golf course. Select the nozzle that's right for the job and you're ready to irrigate to incredibly specific distances and locations. For part- or full-circle operation, simply turn the selector to the desired setting—you won't need to change the whole internal assembly.

Precision Control

From 18 to 55 feet, the EAGLE 351B covers exactly what you want, and nothing more. Set it for a full 360° sweep, or set the left and right trips to any arc you choose. No problem if the head is forcibly turned past the trip, either—the Rain Bird Memory Arc® feature automatically returns the rotor to its original arc setting.

RAIN BIRD

The
**Intelligent
Use of Water**

At Rain Bird, we believe it is our responsibility to develop products and technologies that use water efficiently. Our commitment also extends to education, training and services for our industry and our communities

The need to conserve water has never been greater. We want to do even more, and with your help, we can. Visit www.rainbird.com for more information about The Intelligent Use of Water.™
