

New

New On Site Weather Station Maintenance for WS-PRO, WS-PRO2, WS PRO LT

Protect Your Investment

Your WS-PRO, WS-PRO2 and WS PRO LT collect and store weather data from field locations. This information is retrieved by your Rain Bird Central Control Daily, allowing your software to adjust station run time and or schedule day cycle frequency accounting to each day's ET (evapotranspiration) and rainfall. WS-PRO, WS-PRO2 and WS PRO LT are highly accurate, durable and reliable. They are built using the highest quality sensors available and will provide years of reliable data. As with any high tech equipment, it needs maintenance. Lack of maintenance over the years can cause your weather station to not provide the correct data. Often times, weather stations are then unplugged from the system, causing your central control system to be less efficient leading to over or under irrigating.

Rain Bird GSP not only trouble shoots your weather station communications if you are a GSP Member, but we now also have a **New in field refurbishment/maintenance program**. Our certified weather station technicians will assess the health of your existing weather station and provide recommendations on repairs and regular maintenance, to ensure your station's use is optimised.

Your weather station is an important part of your Rain Bird Central Control System. We can help you get your weather station operating properly again to collect the correct data needed to run your irrigation system efficiently.

Benefits of Regular Maintenance

No more guessing if you are running the correct ET. Rain Bird will assess the state of your existing weather station and provide you with recommendations on refurbishments. Once refurbished, enter into a regular maintenance program to ensure you get the most out of your Weather Station.

To find out more about Rain Bird's NEW weather station Service, please contact
Rain Bird Services on 1800 225 512 or email gpservices@rainbird.com.au

Weather Station Services available:
