

***STILL WASTING BUDGET
ON ROTOR PARTS?***

TIME TO SWITCH

If your rotor heads keep sticking, you'll be spending way more than you need replacing parts, and wasting staff time repairing and replacing poor quality rotors.

Rain Bird rotors are the industry standard for the lowest total cost of ownership over the lifespan of your irrigation system. You can IMMEDIATELY reduce costs simply by switching.

We build them to last by paying attention to every last detail. Our patented self-flushing action is built into every rotor. They turn on, rotate, and turn off – CONSISTENTLY.

The benefits don't stop there.

You can consign all of those parts orders to history. There is no need to replace solenoids as our standard solenoid for electric rotors offers 25kv protection, and there's no stocking pilot valves either because our top-quality valves utilise a diaphragm for increased debris resistance and less parts, minimising risk of failure.

Don't delay - make the switch today.

Contact your distributor to request a no-obligation site visit and your personalised conversion plan.

We look forward to welcoming you to the Rain Bird family.
